

Abstract of the Invention

The invention relates to a PDA with a protective cover for its display panel. The technology of the invention relates mainly to a sliding protective cover for the body of a PDA (Personal Digital Assistant) with cellular phone functions. The protective cover may slide onto the display panel, providing protection for the display panel. In addition, on the protective cover there is a window opening, so that when the PDA is not in use, the display panel is covered with the protective cover. The display panel shows a small window, which is visible to a user, for displaying messages related to the cellular phone functions.
